ATF FAST OIL CHANGE

ATF
Multiservice

The ATF system The ATF system is designed to optimize the automatic transmission fluid replacement process, delivering maximum efficiency, speed, and precision.

Thanks to the under-sump collector, used fluid is managed safely and rapidly. Continuous monitoring of both new and used oil levels via integrated sensors enables immediate, highly accurate process control. The fast 25-minute

service cycle minimizes vehicle downtime, while the embedded database provides a guided, step-by-step procedure that leads the operator through every stage.

The system stands out for its intelligent automation, ensuring maximum precision and safety—all backed by dedicated technical support from TREDLAB assistance.

45 FITTINGS INCLUDED

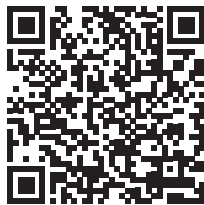

Over 90 fittings, designed and manufactured with utmost care to prevent oil leaks during coupling.

CONNECTED,
INTUITIVE,
AND SAFE

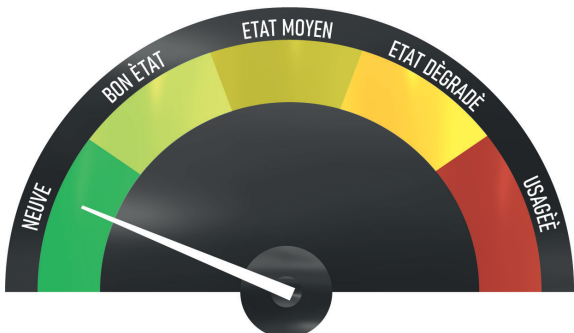

10-inch high-definition color touchscreen;
integrated database for online and offline
consultation. Automatic updates upon
reconnection. Step-by-step guided procedures
with photos. Detailed PDF report generated at
the end of the operation.

OIL QUALITY CONTROL

through an integrated sensor for
process optimization and safer oil
changes.

Visual inspection of used and
new oil.

INTEGRATED OIL RECOVERY

Liftable collector with a 10L capacity, equipped with an anti-splash design. Precise oil quantity weighing ensures a safe and accurate recovery process.

ROBUST CONSTRUCTION

Heavy-duty steel frame equipped with large trolley-style wheels for easy movement, even over scissor lifts. Premium hydraulic hoses for oil suction and supply rated up to 28 bar pressure.

AUTOMATIC FLOW DETECTION

The system detects flow direction and automatically reverses it if connected incorrectly. The same protective function applies in the event of dry operation (running without oil).
